^ Return figures are calculated and provided by Mason Stevens and are accurate as at the date indicated. Performance may be calculated using different assumptions, depending on the administration platform supporting the portfolio. Returns are calculated net of investment management fees, performance, administration, custody, withholding tax and transaction fees and assume reinvestment of all income except franking credits. Actual returns for each client's portfolio may differ depending on factors such as the date of initial investment into the portfolio, timing of transactions, contributions and withdrawals, other fees and any customisations. Past performance is not an indicator of future performance. Each client should take into account their own tax circumstances.

VALOR ASSET MANAGEMENT

Portfolio Details

Platform: Mason Stevens
Fees included in advice fees
Indirect Cost Ratio: 0.00% p.a.
Inception Date: 23/03/2017
Portfolio Manager: Robert Shears
Growth Asset Neutral Weight: 95%
Benchmark: RBA Cash + 5%
Min. Investment: \$100,000

Portfolio Description

Valor's 'Safety First' investment philosophy focuses on avoiding permanent loss of capital while aiming to provide attractive investment returns over the longer term. Valor's bottom-up investment selection methodology strives to invest in high quality businesses that possess strong and durable competitive advantages, pristine balance sheets and led by disciplined managements with 'skin in the game'. Our longer-term approach means we reduce turnover in our portfolios and in turn minimise both transaction costs and taxation. Occasionally there are short-term mispriced opportunities with higher after-tax returns than our longer-term investments and we take advantage of these rare events. Investments made using this philosophy often perform comparatively well through market cycles.
